DETAILED ACTION

1. This Office Action is in response to the amendment filed on 3/10/2009. Claims 1-22, 24-45 are pending.

Allowable Subject Matter

2. After further search and thorough examination of the present application and in view of the prior art of record, claims 1-22, 24-45 are found to be in condition for allowance.

Reason for Allowance

3. The following is an examiner's statement of reasons for allowance: The present invention relates to a method and apparatus for updating the value of a time-out period in a data unit sender.

To achieve the inventive goal, independent claim 1 identifies the distinct features "deriving (S1) an intermediate value (IV) from said n most recent values of said response time in accordance with a predetermined derivation procedure (Der), augmenting (S2) said intermediate value according to a predetermined augmenting procedure (Aug), reducing (S3) the current value of said time-out period according to predetermined time-out period reducing procedure (Red), determining the maximum from among at least said augmented intermediate value and said reduced current value of said time-out period, and setting a new value of said time-out period to said maximum value."

Independent claim 24 identifies the distinct features, a value setting element comprising: "an element for deriving an intermediate value from said n most recent values of said response time, an element for augmenting said intermediate value according to a predetermined

augmenting procedure, an element for reducing the current value of said time-out period according to predetermined time-out period reducing procedure, an element for determining the maximum from among at least said augmented intermediate value and said reduced current value of said time-out period, and an element for setting a new value of said time-out period to said maximum value.”

The Prior Art of record, [Lee (U.S. Pat. No. 5,774,479), Lei (U.S. Pat. No. 6,401,127)], teaches various methods and apparatus for updating the value of time-out period in a data unit sender. However, none teach the use of a retransmission element for implementing a retransmission mechanism according to which said data unit sender retransmits data units in dependence on said feedback messages, wherein the retransmission mechanism comprising a time-out feature according to which said data unit sender retransmits a given data unit if said data unit sender does not receive within said time-out period a feedback message indicating the correct receipt of said given data unit.

The specific features disclosed in the instant application (No. 10/595,018) are neither anticipated nor render obvious by the prior art of record. Furthermore, the prior arts of record, taken singly or in combination, fail to teach, anticipate, suggest, or render obvious the foregoing limitations.

These limitations, in conjunction with all other limitations of the base claims were not shown by, would not have been obvious over, would not have been fairly suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
